From Wiley-Blackwell : Mineralized Tissues in Oral and Craniofacial Science: Biological Principles and Clinical Correlates background osteoporosis is a major public health problem of largely unknown cause loss of function mutations in the gene for low density lipoprotein receptor review article mechanisms of disease antiinflammatory action of glucocorticoids new mechanisms for old drugs turk rhen phd and john a cidlowski phd Mineralized Tissues in Oral and Craniofacial Science: Biological Principles and Clinical Correlates:

0 of 1 review helpful Boilerplate infallibilism By Customer This boilerplate bok parrots so called facts about mineralized tissues without evidence of critical thinking as if there wasnt a reproducibility crises in medical research

The danger here is that the authors present research as infallible and practices based on such research as infallible This is the type of naive realism that has no proper place in a science Mineralized Tissues in Oral and Craniofacial Science is a major comprehensive update on knowledge in the field of mineralized tissues in the oral and craniofacial region Drs McCauley and Somerman assembled an international team of researchers and clinicians offering a global perspective on the current knowledge in this field Basic and clinical correlates reinforce the significance of research to clinical diagnoses and therapies written in a manner that lends "Notwithstanding these minor points the book is very well structured and provides a comprehensive overview of all the mineralized tissues in in the craniofacial complex with interesting aspects of the requirements for successful clinical applications
