By Rahamath Ulla Khan, Verdine Virginia Antony : Bond Strength In Orthodontics: Comparison of shear bond Strengths and remnant Adhesive on debonding the purpose of this study was to compare the shear bond

strength and adhesive remnant index ari at the enamel bonding interface of precoated and conventionally bond strength in orthodontics comparison of shear bond strengths and remnant adhesive on debonding document about bond strength in orthodontics comparison of shear bond Bond Strength In Orthodontics: Comparison of shear bond Strengths and remnant Adhesive on debonding:

Demineralization of enamel has been one of the iatrogenic effects of fixed orthodontic therapy for which various authors have suggested the use of fluoride to reduce the decalcification and development of white spot lesion In the present study the shear bond strength of light cure composite adhesive self cure composite adhesive light cure glass ionomer cement and acidic primer were tested at the end of 24 hours after bonding The results proved that the acidic prime About the Author Dr Rahamath ulla Khan MDS Dortho PGDHM PGDCR PGDFO Head Department of Orthodontics and Dentofacial Orthopedics Sirte Dental School Libya is a fellow of WFO ICD RSPH and Pierre Fauchard Academy He is a keen researcher and is pursuing
